

## Pelvic Floor Exercise Apps

Pelvic floor exercises are important for maintaining continence and preventing prolapse. Sexually, they can also come in handy. Even though the muscles can be identified by stopping the urine stream, it is not recommended to do so since it stops the bladder contraction and will lead to dysfunctional voiding and incomplete emptying.

Many women do not perform pelvic floor exercises adequately and likely would benefit from either instruction with biofeedback, a physical therapist, or inserting their fingers in the vagina and trying to accomplish a contraction.

Once the basics are mastered, some of the pelvic floor exercise apps offer daily reminders, while other programs offer long and short holds and repetitions. This feature can be helpful once the proper mechanism involved in performing pelvic floor exercises has been taught. One of the apps, Elvie, incorporates a pelvic floor insert. Other inserts are available with attached instructions that do not require using a phone.

When starting off with pelvic floor exercises, it is advisable to get instruction on how to perform them correctly. Once that has been established, the apps listed below can be helpful as a reminder and guide. It may be advisable to start with the free downloads first. More advanced levels can be downloaded for a fee with most systems, though it may be sufficient to stick with the reminders and the repetition for free. Your doctor or pelvic floor physiotherapist will advise you.
